

5<sup>th</sup> December, 2024

Dear Canadian Customer,

## Canadian PFAS Reporting

### Introduction

In July, 2024, Canada introduced a PFAS (Per- and Polyfluoroalkyl Substances) reporting mandate under the Canadian Environmental Protection Act (CEPA). The requirement makes it obligatory for applicable businesses to submit detailed reports about their usage of PFAS's. As a responsible supplier of products to businesses based in Canada, Harwin wish to warn them about the PFAS's used within their products.

### PFAS Usage and Harwin

The only PFAS used in any Harwin product is PTFE (CAS Number: 9002-84-0). PTFE is used in a number of coax contact and cable products. The presence and quantity of PTFE in a Harwin product can be confirmed by reviewing the product's Full Material Declaration (FMD). FMD's are also known as Material Compositions by Harwin and can be found on the individual product pages of the Harwin website: ([www.harwin.com](http://www.harwin.com)).

If you have any further questions about this subject, please contact the Compliance Team at Harwin using the following email address: [complianceteam@harwin.com](mailto:complianceteam@harwin.com).

Yours faithfully,

**Martin J Perry**, BSc(Eng) MSc CEng MIET  
Product Environmental Compliance Specialist
