Re: Harwin and Conflict Minerals.

Harwin is aware of the requirements of the industry to restrict and eliminate the use of certain materials originating from mines that support the conflicts in, and surrounding, the Democratic Republic of Congo. The materials currently in question are collectively known as 3TG: Tin (Sn), Tantalum (Ta), Tungsten (W) and Gold (Au).

Harwin can confirm that Tantalum and Tungsten are not used in any of our products. However, Tin and Gold are used extensively. Harwin is currently working with our suppliers to ascertain our exposure to potential minerals sourced from conflict mines. At this time, we have almost all the information back, and have not found any source originating from these mines.

This project is ongoing, and we continue to work with our existing and any new suppliers to confirm and complete our route towards being conflict-free.

The company Conflict Mineral Reporting Template (CMRT) reflecting our current status is available for download from the Conflict Minerals page on our website – <https://www.harwin.com/harwin-values/environment/conflict-minerals/>. It is also available from individual product pages.

If you have any further questions regarding this letter, please do not hesitate to contact the Harwin Compliance Team at the email address below.
